**DURABASE CI++
AND CI-H**

DECOUPLING MATTING INSTALLATION GUIDE

Create tiled floors with
confidence using our
15 step guide

1

Ensure the subfloor is strong and rigid enough to bear the weight of the installation and the use to which it will be put.

2

Ensure the surface is clean and free of debris. If in any doubt about the suitability of the subfloor, please contact our helpline.

3

Cut the sections of mat to size and put to one side.

4

Allow for the use of Movement Joints – if required*

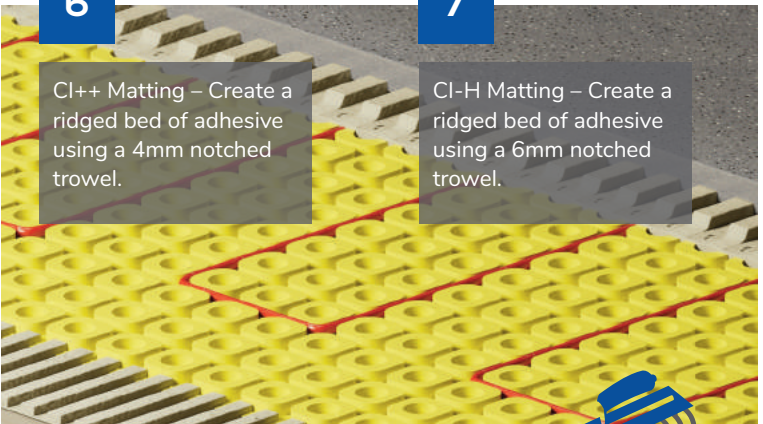

5

Using a suitable adhesive (in most cases this will be a single part flexible powder tile adhesive), prime the floor if required by the adhesive manufacturer's instructions.

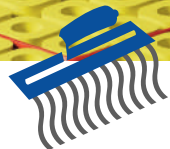

6

CI++ Matting – Create a ridged bed of adhesive using a 4mm notched trowel.

7

CI-H Matting – Create a ridged bed of adhesive using a 6mm notched trowel.

*For more information on Durabase systems, please visit our website – www.cimatting.co.uk or contact our helpline on **01924 360110**.

8

Align the sheet, attach and lay the Durabase CI-H Mat without creases (butt joint installation). Ensure the matting is bedded fully into the adhesive.

Expansion Joints must be considered every 40m².

9

After applying all Durabase CI-H sheets, observe the tile adhesive manufacturer's drying times before continuing work.

10

Lay the heating cables according to your individual requirements. Follow the manufacturer's instructions for installation and connection.

11

Test cables in line with manufacturer's guidance.

12

If being used in a wet area or in a tanking system, seal all seams with our accessory jointing tape and use a suitable waterproof adhesive.

13

CI++ is now ready to accept tiles. Ensure good tiling practice is followed avoiding any voids in the adhesive bedding.

14

CI-H is now ready to accept tiles. Ensure good tiling practice is followed avoiding any voids in the adhesive bedding.

15

CI++/CI-H – We advise using a flexible grout with both mats, with a minimum width of 3mm.
